

Statement Regarding Storage Conditions and Shelf Life of Quick Disconnect Couplings and Connections

Colder Products Company (CPC) manufactures quick disconnect couplings and connections made from a variety of metal, plastic, and elastomeric raw materials. The shelf life of a connector is dependent upon the connector materials and the storage conditions. In general, it is best to store any CPC product in an environment shielded from light at a temperature between 50°F and 90°F.

The shelf life of CPC couplings and connections is estimated to be three years minimum from the date of manufacture if the storage conditions comply with those shown above.

Note: For product containing lubricated o-rings, the lubricant will dry out over time. Prior to use, it may be advisable to re-lubricate external o-rings. For product containing silicone o-rings, if lube is allowable, use of a synthetic lube is recommended.
